

# We are looking for YOU, our missing piece!

iBrowse is looking for final year enthusiasts to join the team for a 6 month internship and then integrate into the team permanently.

## THE PROFILE - what we are searching for

We're looking for people who want to be part of a customer-focused team and to specialize in one of the areas below:

- **VOIP Engineers**, creating and running our customised, **open systems-based VoIP** platform using Open Source software (Opensips, Freeswitch...)
- **Network Engineers**, to developing new products, maintaining and troubleshooting our private international MPLS network.
- **Systems Engineers**, administrating, maintaining and evolving our **Linux-based Private Cloud**, supporting our products and our internal tools.
- **Development Engineers**, developing, maintaining and evolving microservices / services / interfaces for our in-house information system and new new back-end applications (Java, Python).

## THE PERKS - it's more than just a great job

### Company-wide level:

- « Start-up » spirit in a self-financed, profitable and fast-growing company
- Talented, engaged and enthusiastic team
- Technology driven environment
- Careers driven by your interests and development pace
- Positive, bilingual workplace environment (English/French)
- Open communication/little hierarchy
- Multi-tasking, autonomous environment
- Involvement in the company's future
- Innovative, customer service-oriented
- Pan-European MPLS network; international clientele

### On a local level:

- Mentorship opportunity - working with a highly skilled team
- Enterprise level projects - you get to learn best practices while working with latest technologies
- Possibility to travel (to Paris)
- Attractive salary
- Medical subscription

## THE CHALLENGE - what we want to accomplish together

iBrowse runs a fully resilient international MPLS network for thousands of clients, and supports their communications needs for mission-critical applications. Our developers create new products, test them and improve them in a « rapid prototyping » environment with strong customer input in the product design. We rely on engineers who are dedicated to great customer service, to expanding their knowledge and to understanding customer's needs.

You are an enthusiastic, communicative student who is committed to finding great technical solutions to everyday problems. You are autonomous and curious, with solid organisational skills and high attention to detail. Your scholastic projects, professional project or personal projects demonstrate your technical and practical capacity to manage complex projects with multiple participants.

Your English language skills need to be excellent, French is a plus. We are ready to help qualified candidates relocate to Paris.

## OUR BUSINESS

**iBrowse** is an international Internet Network Provider (INP) offering high-value added services to large corporations, including some of the largest international hotel chains. Across Europe, we create and manage international private WANs for large multinational companies with decentralised sites and needs for high quality communications with full redundancy in multiple countries. We provide your choice of circuits from ADSL to fibre-optics over a resilient, redundant MPLS network.

Our solution includes sophisticated QoS, «application-aware load-balancing» as well as a single security policy. We supply high value-added services such as « Internet breakout », firewall hosting, WIFI managed solutions and customised VoIP solutions.

## CONTACT

If you are ready for a challenge send your **C.V.** and a **short letter** explaining your interest to:
